

Russian ORLOFF

Breed Standard Revised 2016

LARGE FOWL

Origin: Iran and Russia

Classification: Heavy, Soft Feather

Egg colour: Cream to light brown

This breed originally came from the Gilan province of northern Iran, where it was known as the Chilianskaia. Some were taken to Moscow and renamed by Count Orloff Techesmsky. From Russia they became known to British, Dutch and German poultry experts in the 1880s and 1890s, and an Orloff Club existed in Britain in the 1920s and 1930s and was reformed as the Russian Orloff Society in 2011. Orloff bantams have been known in Germany since 1925, but did not reach Britain until the 1970s. As this standard indicates, Orloffs are mainly judged on type and character, especially of the head.

General characteristics: male

Carriage: Upright with slightly sloping back.

Type: Body broad and fairly long. Flat slightly sloping back. Breast rather full and prominent. Closely carried wings of moderate length. Tail of medium size with fairly narrow sickles. Carriage rather low but slightly above horizontal.

Head: Skull wide, of medium size. Beak short, stout and well hooked. Eyes full, and deeply set under well projecting (beetle) eyebrows, giving a gloomy, vindictive expression. Comb low and flat, shaped somewhat like a raspberry cut through its axis (lengthwise), covered with small protuberances mingled with small, bristle-like feathers, which peculiarity is particularly noticeable in the female. Face muffled, beard and whiskers well developed. Ear-lobes very small, hidden under the muffles. Wattles small, and show only in the male.

Neck: Fairly long and erect, very heavily covered with hackle (boule), the feathers very full at the top but so close at the base of the neck as to appear thin there, and forming a distinct angle with the back.

Legs and feet: Moderately long and stout. Thighs muscular and well apart. Shanks round and finely scaled. Toes, four, long and well spread.

Female

With exception of the muffling (which is more developed) and the tail (comparatively long) the general characteristics are similar to those of the male, allowing for the natural sexual differences.

Colour

The black

Male and female plumage: Solid black to the skin from head to tail, with beetle-green sheen.

The black mottled

Male and female plumage: Background colour black with a lustrous beetle green sheen. White tips to the ends of each feather and to be evenly distributed. Preferably no more than two white flights on each wing, but more, not considered a disqualifying fault. Beak should be yellow and legs bright yellow, but black or horn coloured mottling or shading not to be penalized.

Defects or Serious defects: Rust or grey colour in plumage. Uneven white patches in the plumage. Too much white in the hackle and sickles.

The cuckoo

Male and female plumage: As in cuckoo Leghorn.

The mahogany

Male plumage: Beard and whiskers a mixture of black, mahogany and grey, grey pre-ponderating. Neck hackle rich dark orange to mahogany, darkest at the crown and showing very slight black stripes at the base only. Saddle rich mahogany shading to deep orange. Wings rich deep mahogany with a strongly defined green black sheen.

Female plumage: Muffings as in male. Hackle mahogany, the lower feathers showing black striping. Tail mainly black. Remainder rich dark mahogany uniformly peppered with black, the entire absence of black, or heavy and irregular black splashes undesirable.

The spangled

Male plumage: Hackles rich orange to mahogany, with white tips to as many feathers as possible. Back rich mahogany. Wings rich mahogany with black bar showing green or purple sheen, and white flights. Breast solid black with white tips, blotchiness or washiness undesirable. Tail green black.

Female plumage: Light mahogany with white tips, the spangling to be as uniform as possible.

The white

Male and female plumage: Lustrous white from head to tail.

In both sexes and all colours

Beak yellow, with a thin rose-tinted skin at base of beak and nostrils. Eyes red or amber. Comb, face, ear lobes and wattles red. Legs rich yellow.

Weights

Cock 3.6kg (8lb); cockerel 3.2kg (7lb)

Hen 2.70kg (6lb); pullet 2.25kg (5lb)

Scale of points

Comb and other head points including beard, whiskers & boule	35
Type and carriage	25
Colour	15
Condition	15
Legs	<u>10</u>
	100

Serious defects

The absence of beard, whiskers, and boule are considered a serious fault. Legs other than yellow. Comb of any other form than as described. Weak, deformed or diseased specimens.

Disqualifications

In this breed the colour is of secondary importance and is a deciding point only in close competition. The main characteristics of the Orloff are its peculiarities of shape, comb, head and carriage and judges are earnestly requested to bear this in mind when awarding prizes. Slight feathering or down between the toes is not to constitute a disqualification.

BANTAM

Orloff bantams follow the large fowl standard.

Weights

Cock 1300g (40oz); cockerel 1200g (36oz)

Hen 1000g (36oz); pullet 900g (32oz)
